1	ID	Type	Description	Priority	Acceptance Criteria	Rationale	
2	FR-001	Functional	The system shall parse inbound Shopify/WooCommerce order webhooks, verify supplier API inventory, and auto-dispatch supplier purchase orders.	High	Pass: Supplier PO is triggered with customer delivery address. Fail: Order is placed for an out-of-stock supplier SKU.	Core order orchestration functionality.	
3	FR-002	Functional	The system shall verify the availability of each ordered SKU with the corresponding supplier before dispatching a purchase order.	High	Pass: Supplier API confirms stock before PO dispatch. Fail: PO is dispatched without successful stock verification.	Prevents orders for unavailable products.	
4	FR-003	Functional	The system shall split a multi-vendor customer order into separate supplier purchase orders based on the supplier assigned to each SKU.	High	Pass: An order containing products from 2 suppliers produces 2 separate supplier POs.	Required to handle multi-vendor orders.	
5	FR-004	Functional	The system shall record and associate supplier tracking numbers with the corresponding customer order.	High	Pass: A received tracking number is stored and linked to the correct customer order.	Enables shipment tracking.	
6	FR-005	Functional	The system shall notify the E-Store Owner when an order cannot be fulfilled because a required supplier SKU is unavailable.	Medium	Pass: Owner receives a notification for every order containing an unavailable SKU.	Allows the owner to take corrective action.	
7	NFR-001	Nonfunctional	Inbound webhook processing must acknowledge receipt with HTTP 200 within 200 ms to prevent provider webhook retry storm.	High	Benchmarking confirms HTTP 200 acknowledgement within 200 ms under simulated peak load.	Prevents webhook retries and duplicate processing.	
8	NFR-002	Nonfunctional	The system shall protect supplier and storefront API communication using authenticated and encrypted connections.	High	Pass: All API requests use authentication and HTTPS; unauthenticated HTTP requests are rejected.	Protects order and supplier information.
